

# WHEN VIRTUAL MACHINES GO BAD

Virtualization Manager from SolarWinds® can change the way you manage VMs.

## ROGUE VMs

Can you really find all the rogue VM's in your network? Do you know how much damage they can cause?

## ORPHANED VMs

They can eat up storage and slow response times down. Find them and get rid of them forever.

\$330

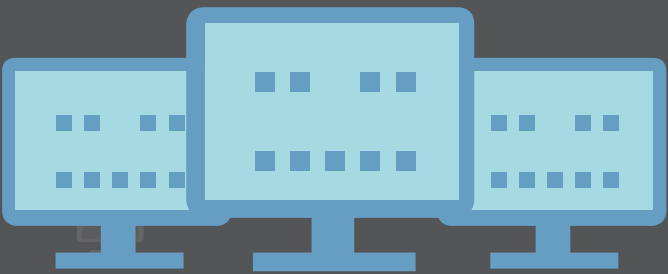

## VM SPRAWL

Amount VM Sprawl can cost per server managed in system software and administrative costs.

## WASTED LICENSES

How many software licenses are languishing in rogue VM's on your network? Only one way to find out!

## IDLE MACHINES

They can slow you down and finding them without help is almost impossible. Virtualization Manager can fix this.

## HOW CAN YOU OVERCOME THIS?

## MANUAL VM MANAGEMENT

## AUTOMATED VM MANAGEMENT

## SPREADSHEET MANAGEMENT

You'd have a hard time managing even 90 VM with traditional spreadsheets. Automate the task and more than double the VM's you can manage.

45%

## TIME LOST

If you're manually managing your VM's, you could be losing up to 45% more time.

## WASTED RESOURCES

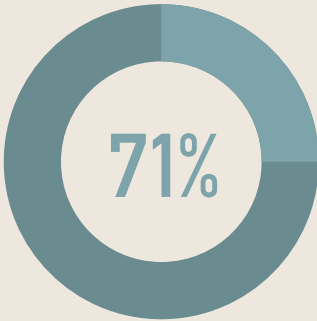

Studies show manual management can result in unneeded and underutilized CPU's, memory and storage in each environment.

130%

## MANAGE HUNDREDS OF VIRTUAL DEVICES

With Virtualization Manager, you can now manage well over 200 VM's and stay productive at the same time.

## PLAN? WHAT PLAN?

of those surveyed say they do "no" or "partial" analysis to reclaim wasted capacity and just add new resources to keep up.

## SAVE OVER

\$70K

Reducing VM sprawl can save a lot of money in wasted hardware, software and YOUR time.

SAVE OVER 65%

Virtualization Manager can reduce time spent troubleshooting and managing VM sprawl. What will you do with all that time?
